

RHETECH INC.
A Semitool Company

AUXILIARY SYSTEM MODULE™

By Rhetechnology, Inc.

RHETECH™ is the most widely recognized and highly respected name in high technology equipment restorations. We are committed to maintain and strengthen our role as a world-class remanufacturer of wet processing systems. Our superior restoration services and restored equipment ensure our customers an economical and competitive edge in the production of high technology devices well into the next century.

RHETECH...The Alternative to Purchasing New Semiconductor Processing Tools.

The **AUXILIARY SYSTEM MODULE** economically adds two chemical tanks to an existing Semitool Spray Solvent Tool. This allows the users to add additional chemistry to a process when budget constraints prevent the purchase of a larger solvent tool.

The **BASIC** module is housed in a stainless steel, free standing cabinet and includes two unheated six gallon tanks, Trebor 610 pneumatic pumps consisting of Teflon® chemical lines with Flaretek fittings, flow meters and filters plus a modification kit (including software) for the Semitool SST.

The **ADVANCED** module includes externally heated tanks (upgrading the unheated tanks) and heater control system, plus the items listed above.

Configuration for Advanced System

Footprint: 24"W x 34" D x 36"H

Facility hookup

CDA 3/8" tube

Exhaust 4"od

Electric 208 VAC, 5 wire, 30A

Reclaim: SS braided 3/4" Swagelock for parent tool

Tank Drain: 1/2" Swagelock
