Processing Tools.

Waste Carboy™

This system is intended to provide a portable means of disposal of solvent waste. The sensors provide a means of communicating a full level condition to the parent tool, thus inhibiting any more waste from draining into the carboy. Also provided is two means of draining the carboy, through either pumping the waste to a higher facility container or through a gravity drain to a lower facility containment.

Standard Specifications

Construction: Electropolished stainless-steel tank mounted on stainless-steel frame with casters.

Footprint: 20" W x 24" L x 18" H (tank) – 36" H (handle)

Capacity: 20 Gallons

Connections: (1) 3/4" Stainless-steel self closing quick disconnect
(1) 1/2" Stainless-steel self closing quick disconnect

Clean Out: (1) 4" clean out port located on top

Safety: (1) Pressure relief valve
(2) Magnetic float sensors (high and overfull levels)
(1) Sight gauge

Drain: (1) TFE Pneumatic pump
(1) 3/4" Manual valve for gravity drain

Note: Design can be modified to meet your individual needs.
